General Question

1. Can you tell us about your passion?

I have a passion for the IT world, and my interest in IT began when I was still in school. At that time, I developed skills in recognizing computer components, troubleshooting, and later went on to learn about blogs, websites, and graphic design.

My passion for the IT field grew even stronger when I entered college. I became actively involved in building relationships and forming teams to work on projects involving web and desktop application development. My aspiration is to become a programmer because I have skills and interest in programming languages and databases such as HTML, CSS, JavaScript, PHP, Java, and MySQL.

Upon entering the workforce, my insights into the IT world continued to expand, including an understanding of quality assurance. My experience as a Quality Assurance (QA) professional has allowed me to collaborate with teams to ensure the quality of software, identify, and fix bugs in software. I also play a crucial role in ensuring a positive user experience.

I am confident that with the passion I possess, I can contribute to self-development and optimization, continually learning and growing in the field of QA.

2. Why do you want to be a QA Engineer?

I want to become a QA Engineer because I have the ability to assist users in ensuring the functionality and stability of programs. Additionally, I contribute to analyzing code and testing various scenarios to ensure the absence of bugs, which is something that greatly interests me. Being a QA Engineer can help me build good team communication by combining technical and empathetic aspects. My experience in understanding the user perspective and ensuring their satisfaction provides personal fulfillment for me. Therefore, I can integrate both aspects and make a significant contribution to the success of the product.

3. What is your goal as a QA Engineer?

I want to become an expert in testing methodologies and techniques to ensure the highest quality standards. I have a desire to create new testing methods quickly, accurately, and efficiently to minimize bugs in applications. Additionally, I have a desire to expedite the testing process using various methods. I also aspire to play an active role with the team throughout the entire software development life cycle.

Certainly, to achieve these goals, there are several efforts that I need to undertake, such as learning new things in testing methodologies, developing my skills in automated testing, security testing, and performance testing. I am also determined to enhance my communication and leadership skills.

4. How do you plan your goal as a QA Engineer?

To achieve my goals, I will focus on several key aspects:

- Continuous Learning: I will stay updated on the latest technology and trends in the field of QA through courses, workshops, and online communities.
- Sharpening Technical Skills: I will deepen my knowledge in programming languages, test automation, and other testing tools.
- Effective Communication: I will collaborate with the development team and stakeholders to understand requirements and provide clear and constructive bug reports.

- Testing Plan Writing: Creating a testing plan can help detail the goals and testing processes to be applied to the software product being developed by the team. I will ensure that the testing plan is created as effectively as possible to facilitate a smooth testing process and clear understanding by all relevant parties.
- Time Management: I will maximize my time management skills and pay attention to testing priorities.
- Active Contribution: I will take initiative in the testing process, propose methodology improvements, and actively participate in technical discussions with the team.

5. What is your expectation, If you join with Catalyst as a QA Engineer?

I hope to work in a collaborative work environment, where I can grow and contribute to a professional team. I also look forward to opportunities to enhance my skills, be appreciated for my contributions, have job stability, and the ability to grow with the company. Specifically, I hope to provide the necessary support to the QA team in ensuring the functionality and stability of programs, as well as supporting other developments. I also aspire to receive career promotions after gaining sufficient work experience.
